

Hairepair

Nutritional support for healthy hair

Hairepair is a unique combination of powerful herbs and nutrients that increases to prevent hair loss. It regenerate RBCs, and plays a vital for healthy hair and helps to boost regeneration & prevent hair follicle cell . As follicles produce new hair cells, old cells are being pushed out through the surface of the skin at the rate of about six inches a year. The hair you can see is actually a string of dead keratin cells.

Saw palmetto:

Intriguing research suggests that supplementation with saw palmetto may prove useful in preventing and managing hair loss.

Ref: 1. Prager N, Bickett K, French N, Marcovici G. A randomized, double-blind, placebo-controlled trial to determine the effectiveness of botanically derived inhibitors of 5-alpha-reductase in the treatment of androgenetic alopecia. J Altern Complement Med. 2002 Apr;8(2):143-52.

Betasitosterols :

Betasitosterol could help with hair loss, but we need several long term studies evaluating the role of this nutrient and hair loss before coming to conclusions regarding its effectiveness and adverse effects. It may weakly block DHT formation. **DHT**, which stands for **Dihydrotestosterone (5 α -Dihydrotestosterone)**, is a male sex hormone, an androgen. 5 α -reductase, an enzyme, synthesizes DHT in the adrenal glands, hair follicles, testes and prostate. Male and female adults can lose hair as a consequence of changes in the metabolism of androgen in the body - men more commonly than women. DHT Plays a major role in lose of hair repair

Ref: Effect of betasitosterol as inhibitor of 5 alpha-reductase in hamster prostate. Proc West Pharmacol Soc. 2003.

Stinging nettle extract:

May be taken from the leaf or roots of the .The leaf extract actually contains anti-inflammatory compounds. Nettle root extract contains other helpful compounds which can be used to treat other conditions such as benign prostatic hyperplasia (enlarged prostate). It is also included in many beauty products because research trials indicate that it may be helpful in promoting hair growth. It contains silica, which is a very important component of healthy hair, skin, and nail tissue (more on how that works in a bit). Its anti-inflammatory properties make it great for your entire body, inside and out.

Each film coated tablet contains:	
Sawpalmetto extract	160mg
Betasito Sterols	50mg
Stinging Nettle extract	100mg
DL-Methionine	25mg
N-Acetyl cysteine	25mg
Biotin	5mg
Zinc	15mg
Copper	1mg
Vitamin B12	5mcg
PABA	50mcg

DL-Methionine:

are sources of sulfur. Sulfur has been known to help support hair growth and also keep skin soft, supple, and smooth.* They also support the quality and health of the hair and efficient blood supply to the scalp.*

Ref : www.webmd.com/.../ingredientmono-42-methionine.aspx?...methionine

N-AcetylCysteine :

is also reported to facilitate longer hair growth-beyond that which is individually genetically programmed. It also provides potent anti-oxidant protection to the hair follicle.

Ref: ww.hairloss-research.org/UpdateBestAminoAcidsforHairloss7-11.html

Biotin:

Biotin is vital to cell proliferation, which is why it is a valuable tool in hair growth. It suggests that biotin supplements may improve thin, splitting, or brittle of hair. However, it is important to note that the amount of biotin you take or consume is not commensurate with the amount of hair growth that will occur.

Ref: <http://www.livestrong.com/article/69844-biotin-make-hair-grow-faster/>

Zinc:

is a trace mineral that is found in the body. It plays a vital part in many bodily processes and functions such as in cell reproduction, hormonal balance, proper absorption of vitamins, and in protein synthesis. All these processes are vital for proper hair growth such that an adequate amount of this mineral is needed to prevent hair thinning and loss.

Ref: <http://www.nutritional-supplements-health-guide.com/>

COPPER: The presence of these protein peptides enable the wounds bordered by hair to get healed relatively quickly. SCRP's are particularly beneficial for those healing their scalp and re growing their hair after chemotherapy as they enlarge follicles and reduce the hair growth.

Vitamin: B12:

The visible part of your hair the shaft is composed primary of keratin, a fibrous form of protein. At the base of each hair follicle, tiny blood vessels connect to the root of each hair strand. Red blood cells serve the purpose of carrying oxygen to the living portion of the hair strands. Without adequate oxygen, your hair typically won't be able to sustain healthy growth.

Ref: <http://www.livestrong.com/article/281153-vitamin-b12-for-hair-growth/>

Paraminobenzoic acid:

It is also used to darken gray hair, prevent hair loss. It is known specifically for its nourishment to hair and its usefulness as a sunscreen . It has been well established that PABA is a potent neutralizer of singlet molecular oxygen, a potent free radical, which is a common by-product of normal metabolism. In theory, use of antioxidants protects cellular membranes and mitochondrial DNA from free radical attack. The mitochondria are the energy-producers of the cells. Mitochondrial degradation results in reduced cellular energy production which causes numerous undesirable physiological conditions, which may include fatigue and the aging process itself. As an antioxidant, PABA also provides protection against ozone, smoking, and other air pollutants which damage other cell structures and membranes through oxidative stress. PABA promotes cell membrane fluidity by preventing such oxidant damage.
